

ABSTRACT

A web-based project management system that includes a network-accessible computer server and clients is disclosed, which
5 provides a universally accessible, web-based, shared member workspace for a number of project team members to collaborate on one or more projects. The system does not require a particular software to be used by the team members to access the member workspace and the system's functionality has been designed to be intuitive and easy enough to use so
10 that even the most inexperienced user will find it immediately useful.
